Minnesota's Child Welfare Report 2013

Report to the
2014 Minnesota Legislature

October 2014

Minnesota's Child Welfare Report 2013

This report was prepared by the Minnesota Department of Human Services, Children and Family Services Administration, Child Safety and Permanency Division, for the Minnesota Legislature in response to a legislative directive in Minn. Stat., section 257.0725. This report is available on the Minnesota Department of Human Services website at www.dhs.state.mn.us.

Total estimated cost: \$10,667.30

Cost of preparation: 245 hours x \$43.54 = \$10,667.30

ADA2 (12-12)

This information is available in accessible formats for individuals with disabilities by calling 651-431-4670 or by using your preferred relay service. For other information on disability rights and protections, contact the agency's ADA coordinator.

Executive Summary

The 2013 “Child Welfare Report” published by the Minnesota Department of Human Services describes the state of children involved in Minnesota’s child protection response continuum during 2013 in the areas of child maltreatment assessment and investigation, out-of-home care and adoption. It provides an overview of how children are faring, and presents information about Minnesota’s performance on key child welfare indicators required by state and federal governments.

This report is provided by the Minnesota Department of Human Services, Children and Family Services Administration, in response to a legislative directive. Minn. Stat., section 257.0725, states: “The commissioner of human services shall publish an annual report on child maltreatment and on children in out-of-home placement. The commissioner shall confer with counties, child welfare organizations, child advocacy organizations, the courts, and other groups on how to improve the content and utility of the department’s annual report. In regard to child maltreatment, the report shall include the number and kinds of maltreatment reports received and any other data that the commissioner determines is appropriate to include in a report on child maltreatment. In regard to children in out-of-home placement, the report shall include, by county and statewide, information on legal status, living arrangement, age, sex, race, accumulated length of time in placement, reason for most recent placement, race of family with whom placed, and other information deemed appropriate on all children in out-of-home placement. Out-of-home placement includes placement in any facility by an authorized child-placing agency.”

This report also fulfills reporting requirements under the Vulnerable Children and Adults Act [Minn. Stat., section 256M.80 subd. 2], and the Minnesota Indian Family Preservation Act [Minn. Stat., section 260.775].

The report has four main sections, each followed with an appendix that provides specific county or tribal data on that section. Each section begins with “At a Glance” to highlight key information. Appendices with local-level data complete each section. Note that the counties of Lincoln, Lyon, Murray, Pipestone, Redwood and Rock combined social services to form Southwest Health and Human Services (SWHHS). Faribault and Martin counties combined to form Human Services of Faribault and Martin Counties. In 2014, Cottonwood and Jackson combined to form Des Moines Valley Health and Human Services (DVHHS). In 2008, the American Indian Child Welfare Initiative tribes from the Leech Lake and White Earth Bands of Ojibwe began serving children and families regarding reports of and responses to child maltreatment concerns, out-of-home care and guardianship/adoption.

Section I — Child Maltreatment covers information about alleged and determined reports of child abuse and neglect to local child welfare agencies. Data include counts of assessments and investigations, and sources of reports; prevalence of maltreatment by age, race and ethnicity; offender relationships; and use of Family Assessment and Family Investigative responses and Structured Decision Making instruments implemented by social workers.

Section II — Children in Out-of-home Care provides data on children in placement, including gender, age, race and ethnicity; placement frequency and duration; and re-entry and discharge.

Section III — Adoptions provides trend information about children under state guardianship, including counts and the demographics of children awaiting adoption and of those adopted; information regarding siblings; adoptions occurring in tribal courts; and the length of time from when children became eligible for adoption to finalized adoption.

Section IV — Federal and State Performance Measures presents local-level data in the categories of child safety, timeliness and permanency of reunification, timeliness of adoptions of children discharged from foster care, achieving permanency for children in care for extended periods of time and placement stability, and child well-being indicators of physical and mental health exams and screenings. This section includes measures that are required for publication to inform the Vulnerable Child and Adult Act (VCAA).

It is important to note that each section of the report is distinct. Most children assessed or investigated by child protection for alleged maltreatment did not enter out-of-home care, while many children who were in out-of-home care were placed for reasons other than maltreatment.

The key findings in this report are as follows:

Section I — Child Maltreatment

- Minnesota counties and the Leech Lake and White Earth Bands of Ojibwe provided a child protective services response to 19,602 accepted reports of maltreatment involving 25,297 unique children in 2013.
- Of all accepted maltreatment reports, 14,177 (72 percent) received a Family Assessment child protective services response.
- Of the 5,083 Family Investigations, maltreatment was determined to have occurred in 2,767 investigations (with 4,171 associated victims)
- Of the 342 Facility Investigations, maltreatment was determined to have occurred in 104 investigations (with 175 associated victims).
- Neglect was the most common allegation of maltreatment, found in 64 percent of Family Assessments and 54 percent of Family Investigations. This includes neglecting to provide adequate food, clothing or shelter, endangerment, educational neglect, abandonment and inadequate supervision. Medical neglect is counted separately.
- School personnel and law enforcement made 50 percent of all maltreatment reports to local child protection agencies.
- The need for ongoing protective services was identified in 48 percent of Family Investigations and 16 percent of Family Assessments. Another 13 percent of Family Assessments were offered optional supportive services.
- American Indian and African American/Black children had the highest rates of contact with the child protection system. They were six and three times more likely to be reported as abused or neglected than were White children, respectively.

- Fewer than 3 percent of all determined victims had at least one subsequent determined report of maltreatment within six months.

Section II — Children in Out-of-home Care

- In 2013, 11,510 children spent some time in out-of-home care. The total number of children who experienced out-of-home care has decreased 20 percent since 2004.
- Forty-nine percent of children in placement were age 12 and older. More boys than girls spent time in care. American Indian, African American/Black, and children of two or more races are respectively 15.5, 4.0 and 4.0 times more likely than a White child to be placed out-of-home.
- Sixty-five percent of reasons offered for entry into care were solely related to children's parents; 20 percent were attributed to children's behavior or substance abuse.
- Eighty-four percent of children in out-of-home care were placed in a family type setting.
- About 29 percent of placement episodes were 30 days or less.
- About 67 percent of discharges from care involved return to their caretakers prior to placement; another 10 percent were adopted.

Section III — Adoption

- In 2013, 685 children came under state guardianship (became state wards) as a result of court terminations of parental rights. Fifty-one percent of children entering guardianship were in the birth–3 age group. Of all children entering guardianship, the majority (60 percent) were White, followed by African American/Black (19 percent).
- There were 696 children under state guardianship at the beginning of 2013, and 863 at the end of the year, an increase of 24 percent.
- There were 539 state wards adopted in 2013. Eighty-seven percent of adopted wards were under age 12. Of all children adopted in 2013, 63 percent were White and 17 percent were African American/Black.
- There were 49 state wards aging out of placement at age 18 without a permanent home.
- American Indian and African American/Black children were 3.2 and 3.0 times, respectively, more likely than White children to enter guardianship.

Section IV — Federal and State Performance Measures

- Minnesota met the national standards on the safety measure for recurrence of maltreatment.

- Child welfare agencies excelled in the area of timeliness of reunification of children in placement with primary caretakers; however, Minnesota failed to meet the national standard for the rate of re-entry into foster care.
- For children achieving permanency through adoption, child welfare agencies concluded the process in a timely manner, with 54.7 percent of adoptees in care for less than two years prior to adoption.
- Minnesota did not meet national standards for placement stability nor for permanency for children in care for long periods of time.

Introduction

The data in this section describe alleged and determined incidents of child maltreatment assessed in Minnesota in calendar year 2013. The data show the number of accepted maltreatment reports, the number of child victims, the types and severity of maltreatment, recurrence and re-reporting of maltreatment, what services were recommended, and what actions were taken. It also reflects other information, such as the age and race/ethnicity of victims and their relationship to offenders.

Unless otherwise specified, a child was counted as a “subject of a report” each time s/he was included in a maltreatment assessment or investigation in 2013. However, if the counts were specified as “unique,” a child was counted once in the specified category no matter how many times s/he was assessed during the year.

This report mirrors the method in which the U.S. Census Bureau categorizes race and Hispanic ethnicity. Individuals may indicate they belong to more than one race. Hispanic ethnicity is specified separately from race. For example, children may be counted in a racial group or as having more than one race. They may also claim Hispanic ethnicity.

Anyone can and should report a suspected incident of child maltreatment. Some professionals, such as those working directly with children, are **mandated reporters** and must report to local child protective services if they observe or receive information about an abuse and/or neglect concern. **Non-mandated reporters** voluntarily provide information of known or suspected child maltreatment to local child protection agencies.

Once a referral that includes allegations of maltreatment is made, a screener reviews the initial information about the concern and decides whether or not the report meets the statutory criteria for a child protection response. If it does, the agency determines if the allegations require a **Family Investigation (FI)** or a **Family Assessment (FA)**. By law, reports that include allegations of sexual abuse, egregious harm, homicide, felony assault, abandonment, neglect due to failure to thrive and malicious punishment, and/or maltreatment in a child care program or foster home must be assigned to a Family Investigation. In a **Family Investigation**, county/tribal child protection workers interview persons involved with a report, including the alleged victims, alleged offenders and family members. If the evidence suggests that it is more likely than not that a child has been a victim of maltreatment, and harm was caused by an act, or failure to act, by a person responsible for a child’s care, the county/tribal child protection worker makes a **determination** that maltreatment has occurred. In a Family Assessment, no determination of maltreatment is made. In these situations, a county or tribal worker assesses child safety concerns, the risk of further maltreatment, and works to connect families to services. Family strengths are identified so that they can be used to address the deficits that brought them to the attention of the child welfare system.

Key findings in this report include:

- Minnesota counties and the Leech Lake and White Earth Bands of Ojibwe assessed 19,602 reports of maltreatment involving 25,297 unique children in 2013.
- Of all accepted maltreatment reports, 14,177 (72 percent) received a Family Assessment, a child safety response with a strengths-based and family-focused method for working with families in the child protection system where no determination of maltreatment is made.
- Of the 5,083 Family Investigations, maltreatment was determined to have occurred in 2,767 investigations (with 4,171 associated victims)
- Of the 342 Facility Investigations, maltreatment was determined to have occurred in 104 investigations (with 175 associated victims).
- Neglect was the most common allegation of maltreatment, found in 64 percent of Family Assessments and 54 percent of Family Investigations. This includes neglecting to provide adequate food, clothing or shelter, endangerment, educational neglect, abandonment, inadequate supervision, and prenatal exposure to drugs or alcohol. Medical neglect is counted separately.
- School personnel and law enforcement made 50 percent of all maltreatment reports to local child protection agencies.
- The need for ongoing protective services was identified in 48 percent of Family Investigations and 16 percent of Family Assessments. Another 13 percent of Family Assessments were offered optional supportive services.
- American Indian and African American/Black children had the highest rates of contact with the child protection system. They were six and three times more likely to be reported as abused or neglected than were White children, respectively.
- Fewer than 3 percent of all determined victims had at least one subsequent determined report of maltreatment within six months.

Child Maltreatment Reports: Assessments and Investigations

At a Glance

- Minnesota counties and tribes assessed 19,602 reports of child maltreatment. Of these reports, 72 percent received a Family Assessment response.
- The most common allegation of maltreatment was for non-medical neglect, followed by physical abuse. A report may include allegations of different maltreatment types.
- Law enforcement and school personnel were the most frequent reporters of all reports accepted for assessment or investigation.

Table 1 includes the counts of alleged and determined child maltreatment reports and child subjects by type of assessment. Some children were assessed more than once during the year. The “unique child subjects of reports” column counts them only once within the stated category. Seventy-two percent of reports alleging maltreatment were referred to Family Assessment response. Maltreatment was determined to have occurred in 54 percent of Family Investigations. Counties also investigate alleged maltreatment in family foster homes and childcare homes licensed by the county or tribe. About 30 percent of Facility Investigations resulted in a determination that maltreatment occurred. Maltreatment occurring in state-licensed residential facilities, institutions and childcare centers is investigated by the Minnesota Department of Human Services and is not counted here.

Table 1. Child Maltreatment Reports and Child Subjects by Response Category

Response category	Reports		Child subjects of reports		Unique child subjects of reports*	
	Alleged	Determined	Alleged	Determined	Alleged	Determined
Family Assessment	14,177	NA	19,943	NA	18,467	NA
Family Investigation	5,083	2,767	7,634	4,171	7,155	4,015
Facility Investigation	342	104	525	175	522	175
Total	19,602	2,871	28,102	4,346	25,297	4,183

**The total unique child subjects does not equal the sum of unique children across response types, as some children were in more than one type of assessment.*

Figure 1 shows the 2004–2013 trend in the number of maltreatment reports assessed or investigated by counties or tribes. In recent years, the number of assessments has increased each year from a 10-year low in 2009. The use of Family Assessment response has increasingly replaced Family Investigation as the preferred response. The number of Facility Investigations has remained fairly stable between 2004 and 2013.

Figure 1. Child Maltreatment Reports by Response Category, 2004–2013

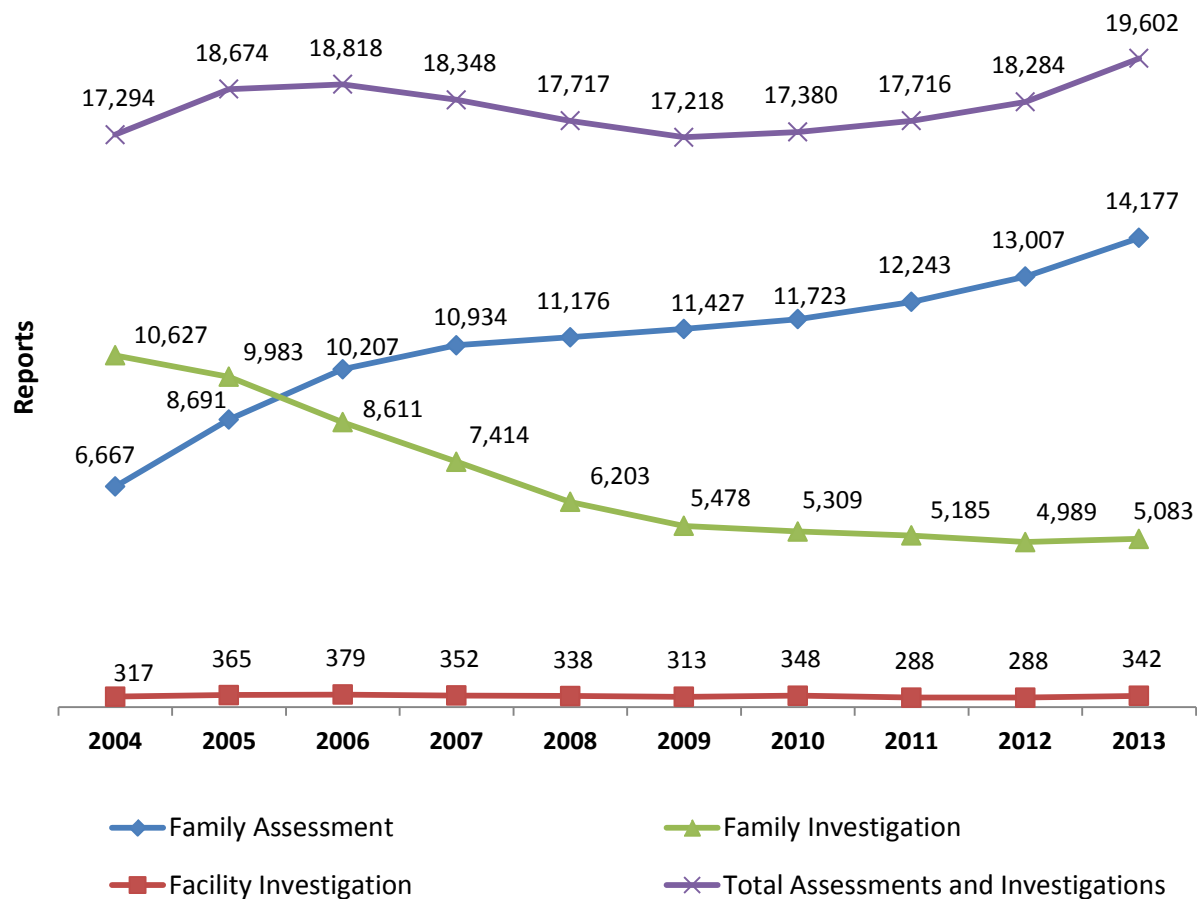

Figure 2 shows that neglect was the most common type of maltreatment alleged in all reports. This category includes emotional neglect, physical neglect (food, clothing and shelter), disregard for safety, inadequate supervision, abandonment, expulsion from home, prenatal exposure to alcohol or drugs, educational neglect, endangerment, failure to thrive, and chronic chemical abuse by a primary caretaker. Allegations of neglect appeared in 64 percent of Family Assessments, 54 percent of Family Investigations, and 52 percent of Facility Investigations. Physical abuse allegations appeared in 36 percent of Family Assessments, 26 percent of Family Investigations, and 46 percent of Facility Investigations. Sexual abuse allegations appeared in 39 percent of Family Investigations and 15 percent of Facility Investigations. By law, sexual abuse allegations must be investigated and result in a determination of whether maltreatment had occurred. The 384 Family Assessment sexual abuse reports were possibly unfounded allegations of Family Investigations that were switched to a Family Assessment response in the data system. About 1 percent of all reports had an allegation of mental injury. Medical neglect allegations appeared in 1.2 percent of all reports.

Figure 2. Reports by Maltreatment Type

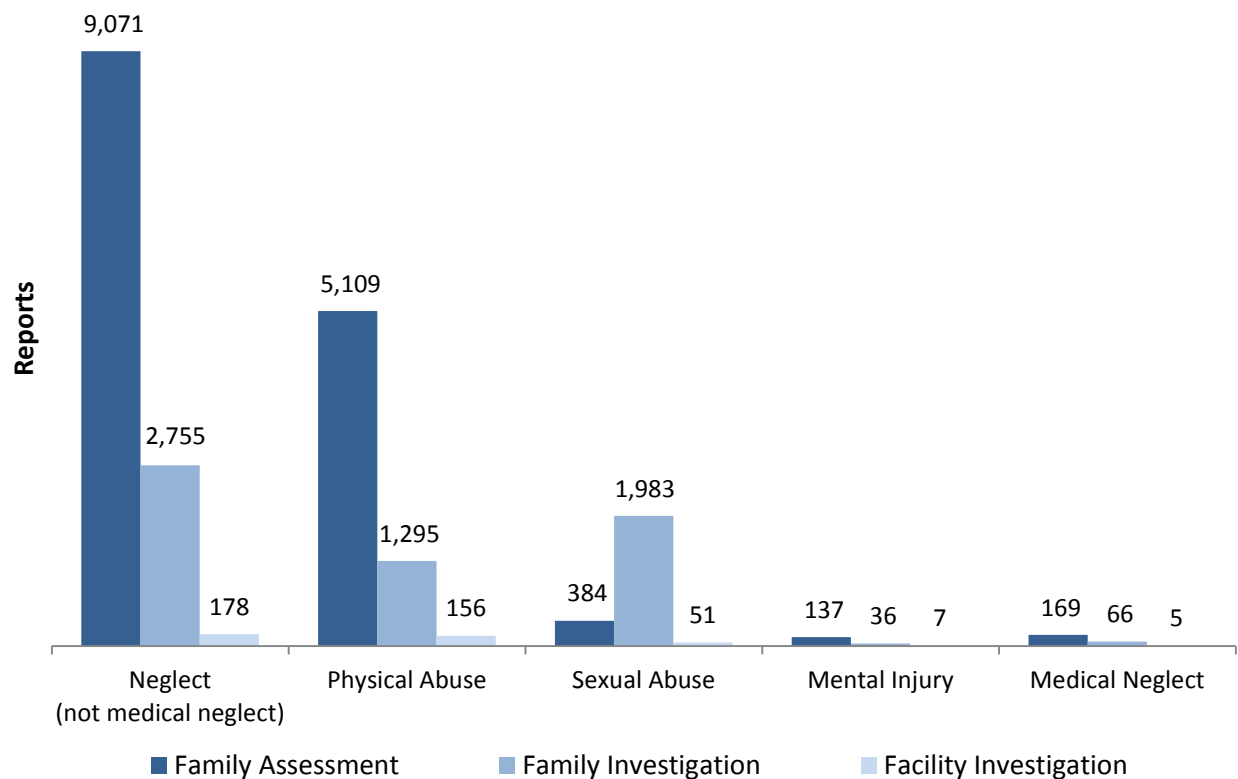

Table 2 shows the percent of investigated reports that resulted in a determination that maltreatment occurred. In Family Investigations, non-medical neglect allegations were the most likely to receive a determination. Facility investigations were less likely to be determined, with only 30 percent demonstrating a preponderance of evidence that maltreatment occurred.

Table 2. Determined Family and Facility Investigations by Maltreatment Type

Maltreatment type	Family Investigation			Facility Investigation		
	Alleged	Determined	Percent determined	Alleged	Determined	Percent determined
Neglect (non-medical)	2,755	1,738	63.1	178	56	31.5
Physical abuse	1,295	633	48.9	156	36	23.1
Sexual abuse	1,983	610	30.8	51	18	35.3
Mental injury	36	13	36.1	7	3	42.9
Medical neglect	66	33	50.0	5	-	0.0
Total reports	5,083	2,920	57.4	342	104	30.4

Table 3 identifies the sources of all maltreatment reports accepted for assessment or investigation. Law enforcement and school personnel made 50 percent of maltreatment reports to child protection agencies. About 83 percent of reports were from those mandated by law to report suspected child maltreatment. Mandated reporters include those in law enforcement, health care, mental health, social services, education and child care, among others who work with children.

Table 3. Sources of Assessed Maltreatment Reports

Report source	Reports	Percent of reports
Law enforcement or courts	5,265	26.9
School personnel	4,498	22.9
Social worker or counselor	2,682	13.7
Health practitioner	2,075	10.6
Parent or relative out of the home	1,266	6.5
Friend, acquaintance or neighbor	718	3.7
Parent or relative in the home	616	3.1
Non-relative caregiver	393	2.0
Other	1,463	7.5
Anonymous	626	3.2
Total reports	19,602	100.0

Demographics of Child Subjects

At a Glance

- About 42 percent of all children in reports of maltreatment were age 5 or younger.
- Girls comprised about 65 percent of alleged victims of sexual abuse.
- Children for whom there were allegations of medical neglect were the most likely to have a disability, with 40 percent indicating at least one diagnosed condition.
- Seventy-seven percent of alleged offenders were biological parents of child subjects.
- American Indian and African American/Black children continued to be over-represented in the child protection system. The incidence statewide of children assessed by child protection among all children was 19.8 per thousand, compared to 83.3 per thousand for American Indian children, 44.1 per thousand for African American/Black children, and 43.9 percent for children of two or more races.

Figures 3 through 7 illustrate the numbers of children reported to child protection by age, gender and maltreatment type. Mental injury maltreatment type is not included due to very small numbers. Overall, girls and boys were nearly equally likely to be reported to child protection, but tended to be reported for different reasons. The age of a child was a factor. Younger children comprised the larger numbers of children reported for neglect, while older children comprised a larger proportion of the physical and sexual abuse cases.

Figure 3. Child Subjects of Maltreatment Reports by Age and Gender

Note: Three subjects of reports were aged 18–20.

Figure 4 shows that infants are the most vulnerable to certain types of neglect due to the high levels of care and supervision required for their health and safety. After infancy, the risk of a child being reported for suspected neglect generally decreases with age. Boys outnumber girls, overall, for neglect allegations, but only in children ages 12 and under.

Figure 4. Child Subjects of Neglect Reports by Age and Gender

Figure 5 shows peaks in physical abuse allegations for infants and 5-7-year-olds. Boys comprised 58 percent of physical abuse reports in children under age 12, while girls appeared more frequently in the teen years. Allegations of physical abuse for boys peaked at age 6 before steadily decreasing with age, while allegations for girls were highest at infancy and age 14.

Figure 5. Child Subjects of Physical Abuse Reports by Age and Gender

Figure 6 shows that girls were 1.8 times more likely to be alleged victims of sexual abuse. Boys were the subjects of sexual abuse allegations most often between the ages of 3–8, after which the reports decreased. The pattern of sexual abuse investigations involving girls showed peaks at ages 5 and 12.

Figure 6. Child Subjects of Sexual Abuse Reports by Age and Gender

Figure 7 reveals that infants were at much higher risk of medical neglect than children of any other age. About 17 percent of children reported for medical neglect were under age 1.

Figure 7. Child Subjects of Medical Neglect Reports by Age and Gender

In Figure 8, child subjects per 1,000 counts were calculated by dividing the number of unique child subjects of reports for each race by the 2013 U.S. Census Bureau child population estimate for that race in Minnesota, then multiplying by 1,000. Table 4 shows the raw data used to calculate the rates. In the total Minnesota child population, 19.8 children per thousand were alleged victims of child maltreatment in 2013. American Indian and African American/Black children were more likely than children of other races to be involved with the child protection system. They were six and three times more likely than a White child to be subjects of an allegation of maltreatment, respectively. Asian or Pacific Islander children had the lowest rate of reports to child protection overall, and for each maltreatment type. American Indian children had the highest rates overall, and for each maltreatment type. Mental injury and medical neglect categories were excluded from the graph due to small numbers.

Figure 8. Incidence per 1,000 by Race/Ethnicity and Maltreatment Type

Table 4. Maltreatment Type by Race/Ethnicity

Race/Ethnicity	2013 Child population est.	Total unique children	Neglect (non-medical)	Physical abuse	Sexual abuse	Mental injury	Medical neglect
African American/Black	106,309	4,693	3231	1365	523	13	56
American Indian	23,857	1,988	1641	389	153	22	32
Asian/Pacific Islander	74,521	620	361	243	63	2	8
White	1,006,559	14,442	9154	4436	2033	189	134
Two or more races	67,865	2,978	2201	743	349	12	18
Total children	1,279,111	25,297	16,974	7,340	3,190	239	248
Hispanic ethnicity—any race	107,281	2,634	1781	703	356	24	14

For all children in reports of maltreatment by a family caretaker, 72 percent were assigned to Family Assessment response. White children were more likely to be in reports assigned to Family Assessment than children of other races.

Figure 9. Child Protection Response Category by Race/Ethnicity

Figure 10 shows the percentages within each race of whether cases were assigned to Family Investigation for mandatory or for discretionary reasons. Reasons that mandate an assignment to Family Investigation include sexual abuse, egregious harm, homicide, felony assault, abandonment, neglect due to failure to thrive and malicious punishment. Discretionary reasons include a recent or frequent history of child maltreatment reports or child protective services, or the caretaker appeared to be unwilling or unable to achieve child safety. Overall, 57 percent of assignments to Family Investigation are for reasons mandated by law. Children of color are all more likely than White children to be assigned to Family Investigation for discretionary reasons.

Figure 10. Reason for Investigative Response by Race/Ethnicity

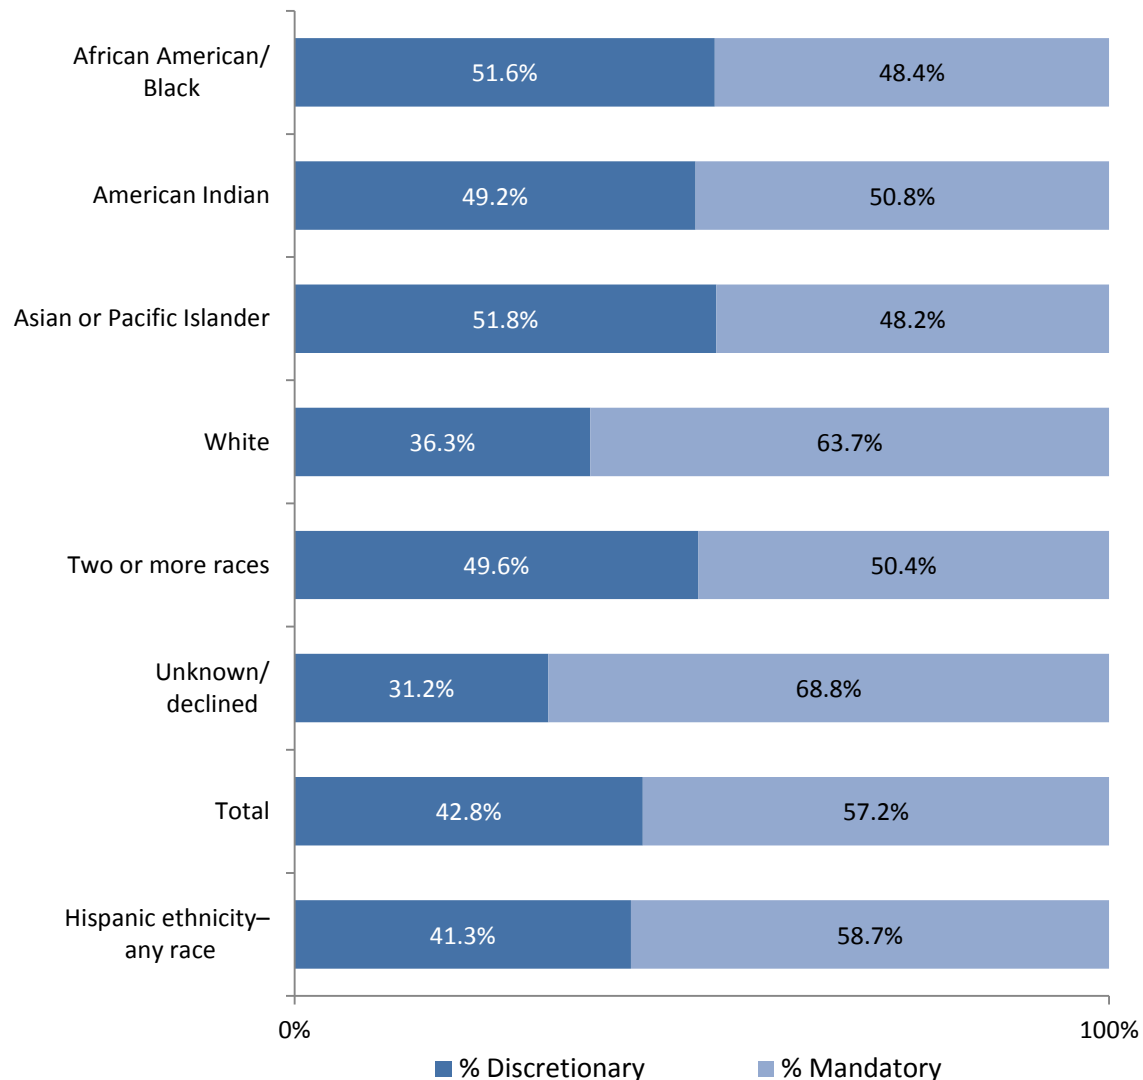

Table 5 shows the percentage of children in all assessments and investigations by disability status and maltreatment allegations. While 16.9 percent of children reported to child protection had a known disability, only an estimated 3.8 percent of Minnesota’s population under age 18 had a disability (U.S. Census Bureau, 2012 American Community Survey). Emotional and behavioral disturbances were by far the most commonly identified disabilities, followed by developmental disabilities. Children for whom there were allegations of medical neglect were the most likely to have a disability, with 39.9 percent indicating one or more disabilities.

Table 5. Maltreatment Type by Child Disability Status

Disability status	Percentage with a disability					
	Total unique children (N=25,297)	Neglect (non-medical; N= 16,974)	Physical abuse (N= 7,340)	Sexual abuse (N= 3,190)	Mental injury (N= 239)	Medical neglect (N=248)
Any disability	16.9	14.4	23.3	19.1	33.9	39.9
Emotional disturbance	8.4	6.6	13.4	10.0	29.3	11.3
Developmental disability	2.8	2.7	3.1	2.6	2.9	8.9
Learning disability	1.0	1.1	1.2	0.9	0.0	2.0
Speech impairment	1.0	0.9	1.4	1.3	0.0	0.8
Physical disability	0.5	0.5	0.5	0.4	0.4	6.0
Chemical dependency	0.4	0.4	0.6	0.3	0.4	0.4
Hearing impairment	0.2	0.2	0.3	0.2	0.4	0.0
Visual impairment	0.2	0.2	0.2	0.1	0.0	0.8
Other diagnosed condition	3.2	2.9	3.7	3.5	1.7	16.9
Currently being evaluated	2.0	1.6	2.7	2.4	0.8	4.0

Table 6 shows the relationship of alleged offenders to the children in assessments and investigations. Birth parents accounted for 76.5 percent of alleged offenders.

Table 6. Relationship of Alleged Offenders to Child Subjects of Reports

Relationship	Percent of alleged offenders (N=23,791)
Biological parent	76.5
Adoptive parent	1.2
Stepparent	3.5

Results of Child Protection Assessments and Investigations

At a Glance

- Most families (77 percent) were experiencing one or more family conditions that may have contributed to risk of child maltreatment.
- About 48 percent of Family Investigations and 16 percent of Family Assessments were identified as requiring further protective services. Optional supportive services were recommended or offered to 13 percent of families who received a Family Assessment response.
- The most frequently recommended services to families included family or individual counseling, parenting education and chemical dependency services.
- Children of color and tribally affiliated children had higher maltreatment recurrence rates than White children.
- There were 17 deaths determined to be a result of maltreatment in 2013, and 36 victims with life-threatening injuries. Of the 17 children who died as a result of maltreatment, 10 had been known to child protection at some point prior to their death.

Figure 11 shows the 2004–2013 trend in the number of deaths and life-threatening injuries determined to be the result of maltreatment by a caretaker.

Figure 11. Deaths and Life-threatening Injuries, 2004–2013

Figure 12 depicts the prevalence of known family conditions identified by social workers during an assessment or investigation. Most families (77 percent) were experiencing at least one of the eight issues shown below. About 45 percent of families in maltreatment reports had parenting issues, while 33 percent of families were dealing with mental health conditions.

Figure 12. Prevalence of Family Conditions

The assessment/investigation process includes use of the Structured Decision Making Family Risk Assessment instrument to determine the risk of future child maltreatment. This risk is determined based on quantifying and weighting observations of family conditions such as past child protection involvement, parental characteristics, domestic violence, and vulnerability of the child. The purpose of the risk assessment is to determine a family's need for ongoing services or monitoring. Families assigned for a Family Investigation tended to be more high risk. Figure 13 illustrates this difference.

Figure 13. Maltreatment Risk Assessment Level by Response Category

Figure 14 shows that the majority of alleged maltreatment reports were closed after an assessment or investigation. Protective or supportive services were required or offered in 6,512 of the 19,260 total Family Assessments and Family Investigations (33.8 percent). About 48 percent of Family Investigations and 16 percent of Family Assessments were identified as needing further protective services. Optional supportive services were recommended or offered to 13 percent of families who received a Family Assessment response.

Figure 14. Referrals for Ongoing Services by Response Category

Figure 15 identifies the frequency at which child protection workers recommended various services to address the trauma of child maltreatment and reduce risk factors to prevent future abuse or neglect. The most commonly recommended service was mental health or individual counseling, followed by parenting education, and mandated child protective services.

In Figure 16, of all victims in determined investigations between July 1, 2012, and Dec. 31, 2012, 2.8 percent had a subsequent determined report of maltreatment within six months, and 5.0 percent were victims again within 12 months. American Indian children had the highest rates of maltreatment recurrence in the six- and 12-month time frames. Data should be interpreted with caution because of the small numbers in both the numerators and denominators. Table 7 includes the raw data.

Figure 16. Six- and 12-month Maltreatment Recurrence Rate by Race/Ethnicity

Table 7. Six- and 12-month Maltreatment Recurrence Rate by Race/Ethnicity

Race/Ethnicity	Determined victims 7/1/2012– 12/31/2012	Victims– recurrence within six months	Victims– recurrence within 12 months
African American/Black	418	14	29
American Indian	204	11	16
Asian/Pacific Islander	68	0	0
White	1,061	16	30
Two or more races	281	16	26
Unable to determine	21	1	1
Total	2,053	58	102
Hispanic ethnicity–any race	235	7	15

Family Assessment does not result in a determination of maltreatment; therefore, the safety performance measure of maltreatment recurrence did not apply to the majority of children who received an assessment in response to a report alleging child abuse or neglect. Table 8 and the corresponding tables in the Appendix refer to the rate of re-reporting that can be applied across Family Investigation and Family Assessment for purposes of monitoring the effectiveness of interventions as a result of initial and subsequent reports of maltreatment.

Table 8. Six- and 12-month Re-reporting Rate by Response Category

Response type	Total unique child subjects 7/1/2012– 12/31/2012	Re-reported within six months	Percent re-reported within six months	Re-reported within 12 months	Percent re-reported within 12 months
Family Assessment	8,360	842	10.1	1,420	17.0
Family Investigation	3,419	293	8.6	508	14.9
Facility Investigation	217	9	4.1	22	10.1
Total*	11,829	1,119	9.5	1,907	16.1

**Total is less than the sum of each response type as children may have been in more than one response type.*

Child Maltreatment Appendix

Child Subjects of Maltreatment Reports per 1,000 in the Child Population

Note: Investigation is a unique count of children in Family Investigations and Facility Investigations.

County/Tribe	Child population (est.), 2013	Total		Family Assessment		Investigation–Alleged		Investigation–Determined	
		Unique children	Children per 1,000	Unique children	Children per 1,000	Unique children	Children per 1,000	Unique children	Children per 1,000

Total	1,279,111	25,297	19.8	18,467	14.4	7,640	6.0	4,183	3.3

**These numbers represent the 2010 U.S. Census for children residing on the Leech Lake and White Earth reservations and who indicated "American Indian" alone or as one of two or more races. There are no intercensal child population estimates for these groups. The Leech Lake reservation overlaps Cass, Itasca, Beltrami, and Hubbard counties. The White Earth reservation overlaps Mahnommen, Becker, and Clearwater counties.*

Child Subjects of Reports by Maltreatment Type and Response Category

Note: A report may allege more than one type of maltreatment; therefore, totals do not equal the sum of the reports in maltreatment types. "Det." is an abbreviation for "determined." Children are counted for each assessment or investigation of which they are a subject. "Investigation" is a count of children in Family Investigations and Facility Investigations.

*The 543 child subjects of Family Assessment sexual abuse reports were possibly unfounded allegations of Family Investigations that were switched to a Family Assessment response in the data system.

Assessments and Investigations by Maltreatment Type and Response Category

Note: A report may allege more than one type of maltreatment; therefore, totals do not equal the sum of the reports in maltreatment types. "Det." is an abbreviation for "determined." "Investigation" combines Family Investigations and Facility Investigations.

*The 384 Family Assessment sexual abuse reports were possibly unfounded allegations of Family Investigations that were switched to a Family Assessment response in the data system.

Child Protection Services Needed or Supportive Services Offered

The table below includes the number and percent of Family Assessments (FA) where child protection services were needed or optional supportive services offered, and the number and percent of Family Investigations (FI) where child protective services were needed. Facility Investigations are not included in this analysis due to small numbers and rare referrals for services.

Introduction

This section focuses on children in out-of-home placement. The terms “out-of-home placement,” “out-of-home care,” “foster care,” and “in care” are used interchangeably in this report. All terms refer to children who experienced one or more days in a placement setting outside of their original home during the 2013 calendar year. Various tables and figures feature data about child demographics, removal episodes out of the original home, number of placement settings within a removal episode, length of time in care, reasons for entry, discharge and re-entries into care. Comparisons are made to the child population by race or ethnicity in Minnesota to understand racial disparities in numbers of children in placement.

An episode of care is defined as an entry into, and an ultimate discharge from, out-of-home care. An episode could have more than one living arrangement, called a placement setting. A child may experience one or more placement locations, or moves, which may occur in different types of settings in a given episode.

A child in the custody of a county agency or tribe may have spent time in other settings during an episode of out-of-home care, such as summer camp, hospital, a trial home visit, boarding school, non-custodial parent’s home, job corps, or an unauthorized absence. These locations, and days in these locations, are not included in the listing or the sum of days in placement settings. However, these locations and days are included within the start and end dates of an episode of care. A discharge from care occurs when a child is no longer in the court-ordered custody of a county agency or tribe, or when a Voluntary Placement Agreement ends.

This report mirrors the method in which the U.S. Census Bureau categorizes race and Hispanic ethnicity. Individuals may indicate they belong to more than one race. Hispanic ethnicity is specified separately from race. For example, children may be counted in a racial group or as having more than one race. They may also claim Hispanic ethnicity.

Key findings in this report include:

- In 2013, 11,510 children spent some time in out-of-home care. The total number of children who experienced out-of-home care has decreased 20 percent since 2004.
- Forty-nine percent of children in placement were age 12 and older. More boys than girls spent time in care. American Indian, African American/Black, and children of two or more races are respectively 15.5, 4.0 and 4.0 times more likely than a White child to be placed out-of-home.
- Sixty-five percent of reasons offered for entry into care were solely related to children’s parents. Twenty percent were attributed to children’s behavior or children’s substance abuse.
- Eighty-four percent of children in out-of-home care were placed in a family home setting.
- About 29 percent of placement episodes were 30 days or less.
- About 67 percent of discharges from care involved return to their caretakers prior to placement; another 10 percent were adopted.

Total Children in Out-of-home Care

Table 1 shows that in 2013, 11,510 children experienced 12,288 episodes of removal from home for placement in out-of-home care. The number of children in care on the last day of 2013 (6,059) was about 10 percent higher than the number of children in care on the first day of 2013 (5,515).

Table 1. Flow of Children in Out-of-home Care

	Children	Episodes
Entered care	6,218	6,769
Continued in care (from prior year)	5,515	5,515
Left care	5,851	6,221
Remained in care (at year end)	6,059	6,059
Total unique count*	11,510	12,288

**Children may be counted in more than one category.*

Figure 1 shows that the number of children experiencing out-of-home care decreased by 20 percent from 2004–2013.

Figure 1. Total Children in Out-of-home Care, 2004–2013

Gender, Age and Race/Ethnicity of Children in Out-of-home Care

At a Glance

- Boys were more likely than girls to spend time in out-of-home care
- Forty-nine percent of children in care were age 12 and older
- Trends show relatively stable numbers of children in care for the past five years.
- White children comprised the largest number in out-of-home care; however, American Indian, African American/Black and children indicating two or more races were 15.5, 4.0 and 4.0 times more likely than a White child to be placed in out-of-home care.

Overall, boys comprised 54 percent of children in out-of-home care in 2013. The largest age group in care was 16–18-year-olds. These primarily represent placements related to child behavior. Boys were the majority in placement at nearly all ages.

Figure 2. Children in Out-of-home Care by Age and Gender

Note: One person in placement was indicated as more than 21 years of age.

Figure 3 graphs the trend by age group since 2004. The distribution of children in care has shifted, with the number of children under 12 years increasing and the number of children 12 years and older decreasing. From 2012 to 2013, the birth through five group grew almost 9 percent, while the total population of children in care increased by only 0.5 percent.

Figure 3. Children in Out-of-home Care by Age Group, 2004–2013

Total	2.5%	0.3%	0.2%	-7.1%	-14.9%	-3.9%	1.1%	0.7%	0.5%

The largest group of children in out-of-home care was White; however, African American/Black, American Indian, and children indicating two or more races were over-represented in out-of-home placements relative to their proportions in the child population.

Figure 4. Children in Out-of-home Care Compared to the Minnesota Child Population by Race

Hispanic children are slightly over-represented in out-of-home care. In the 2013 estimated Minnesota child population, 8.4 percent were of Hispanic ethnicity compared to 9.3 percent of children in care.

Figure 5. Children in Out-of-home Care Compared to the Minnesota Child Population by Hispanic Ethnicity

Figure 6 shows the rate of children per 1,000 who experienced out-of-home care by race and ethnicity from 2004–2013. Tables 4 and 5 display the raw data. The rates show that in 2013, American Indian, African American/Black, and children of two or more races, were placed out-of-home at rates 15.5, 4.0 and 4.0 times higher than that of a White child. Children of all races except for American Indian, decreased in the rate of entry into out-of-home care from 2004–2013. African American/Black children had the most dramatic reduction in the rate of out-of-home placement (-43 percent). American Indian children have consistently shown much higher rates of entry into out-of-home care.

Placement Settings and Time in Care

At a Glance

- Eighty-four percent of children in care spent some time in a family foster care setting.
- About 20 percent of placement episodes ending in 2013 were one week or less, and 26 percent lasted more than one year.
- A large majority of children in care for 12 months or fewer (87 percent) lived in one or two different placement locations. A majority of children in care for two or more years experienced three or more different placement locations (69 percent).

Table 5 shows the types and placement settings that children experienced in care. A child is counted once each time they experienced a placement setting type. Nearly half of children spent some time in a non-relative foster family home, and 25 percent spent time in a relative foster family home. Nineteen percent spent time in a residential treatment or institutional facility, which is attributed to a large number of short-term emergency shelter placements.

Table 5. Placement Settings Experienced by Children in Out-of-home Care

Placement Setting	Unique Children*	Percent
Pre-adoptive home –relative	454	3.9
Pre-adoptive home –non-relative	730	6.3
Foster family home –relative	2,903	25.2
Foster family home –non-relative	5,594	48.6
Group home	1,431	12.4
Residential treatment center	2,229	19.4
Supervised independent living	378	3.3
Foster home –corporate/shift staff	296	2.6
Juvenile correctional facility (non-secure, 12 or fewer children)	164	1.4
Juvenile correctional facility (non-secure, 13 or more children)	474	4.1
Juvenile correctional facility (locked)	706	6.1
ICF-MR	29	0.3
Total	11,510	100.0

* Totals are less than the sum of the categories, as a child may have spent time in more than one setting.

Table 6 depicts the duration of episodes that ended in 2013 that were one day or longer. About 20 percent of episodes were one week or less, and 26 percent lasted more than one year.

Table 6. Length of Episodes Ending in 2013

Days in Care	Number of Episodes	Percent of Episodes
1–7	1,210	19.8
8–30	537	8.8
31–90	695	11.4
91–180	811	13.3
181–365	1,297	21.2
366 or more	1,555	25.5
Total*	6,105	100.0

*Does not include 116 episodes that were opened and closed on the same day.

Table 7 includes sums of the number of days in placement settings from 2009–2013. There were 2,057,613 total days of out-of-home care in calendar year 2013 in all placement settings; these numbers have remained relatively stable since 2009. Most days of care (72 percent) were spent in family foster care or pre-adoptive settings followed by residential treatment or juvenile correctional facilities (16 percent).

Table 7. Days in Placement Settings During Calendar Years, 2009–2013

Placement Setting	2009	2010	2011	2012	2013
Pre-adoptive home–relative	96,023	90,557	72,954	88,196	105,923

Total unique children	11,699	11,239	11,368	11,453	11,510

When a child is placed in out-of-home care, a goal of the social service agency is to maintain as much stability in that child's living situation as possible. Figure 7 shows that as children were in care longer, the likelihood that they experienced multiple placement settings increased. For children who were in care for 12 or fewer months, the vast majority lived in one or two different homes or facilities (87 percent). Children in care for two years or more were more likely to move multiple times. Table 8 lists the reasons children moved from one placement to another. The most common reasons for changing a placement setting were begin trial home visit, needs less restrictive placement, and provider request. A trial home visit is not considered a placement and is not counted as a move in the episode in Figure 7.

Figure 7. Moves Within an Episode of Out-of-home Care

Table 8. Reason for Moves from Placement Settings

Reason for Change/Move in Placement Setting	Number of Placement Changes (N=8,828)	Percent
Begin trial home visit	1,256	14.2
Needs less restrictive	1,212	13.7
Provider request	988	11.2
Needs more structure	869	9.8
Relative placement	841	9.5
Child's safety	665	7.5
Needs specialized treatment	661	7.5
Emergency to non-emergency	621	7.0
Runaway	558	6.3
Pre-adoptive placement	265	3.0
Other	892	10.1

Reasons for Entry, Re-entry Rate and Discharge

At a Glance

- Children entering care for child behavior or alcohol and other drug abuse reasons decreased dramatically since 2004.
- About 67 percent of children placed out-of-home, left care to be reunified with parent(s) or primary caretaker.
- About 26 percent of children who were reunified with parents or caretakers prior to placement had a subsequent placement within 12 months. The Child Safety and Permanency Division of the Department of Human Services is engaged in multiple strategies to reduce the number of children re-entering care.

Table 9 indicates the reasons why children entered care. Children were counted only once within each reason, even if placed out-of-home more than one time for the same reason during the year. However, because children may have entered care for multiple reasons, they may have been counted in more than one reason. Child behavior and alleged neglect were the most common reasons for placement. In response to tragedies involving abandoned infants in recent years, the 2012 Minnesota Legislature strengthened the Safe Place for Newborns law. Previously, the law allowed for the safe surrender at hospitals of infants born within three days. Beginning Aug. 1, 2012, the law allows a mother, or a person who has her permission, to anonymously leave a newborn at a designated safe place without fear of prosecution up to seven days after the birth. Additionally, the statutory definition of a safe place has been broadened to include urgent care facilities during regular hours of operation, and ambulance services that are dispatched in response to 911 calls. In 2013, four newborns entered out-of-home care for the reason of Safe Place for Newborns relinquishment.

Table 9. Reasons for Entering Out-of-home Care

Reasons for Entry	Unique Children (N = 11,510)	Percent of Reasons
Abandonment	421	3.7
Alleged neglect	4,032	35.0
Alleged physical abuse	1,282	11.1
Alleged sexual abuse	507	4.4
Caretaker's inability to cope (illness or other)	1,562	12.8
Child alcohol abuse	233	2.0
Child drug abuse	391	3.4
Child's behavior problem	3,427	27.7
Child's disability	773	6.7
Child's mental health issues	77	0.7
Death of parent(s)	59	0.5
Inadequate housing	538	4.7
Incarceration of parents	569	4.9
Parental alcohol abuse	930	8.1
Parental drug abuse	2,762	24.0
Relinquishment or termination of parental rights	107	0.9
Relinquishment–Safe Place for Newborns	4	0.0

** A child may have been placed for more than one reason; therefore, the sum of the reasons for entry exceeds the number of children in placement.*

In Figure 8, the 15 reasons for entry were divided into four categories: Parent reasons, child behavior reasons, child disability, and two or more of these reasons. The specific reasons in each category are related to:

- Parents, including alleged physical abuse, alleged sexual abuse, alleged neglect, parental substance abuse, death or abandonment by a parent, parental inability to cope, incarceration, relinquishment of parental rights, inadequate housing and relinquishment to Safe Place for Newborns
- Children, including behavior, delinquency, status offenses, and their own alcohol or other drug abuse
- A child's disability, including developmental disability or a diagnosis of serious emotional disturbance
- Two or more of the above categories.

When reasons for entry were grouped together, most children entered care for parent-related reasons.

Figure 8. Categories of Reasons for Entering Out-of-home Care

The graph in Figure 9 shows the reason categories for entering out-of-home care for 2004 through 2013. Between 2004 and 2013, there was a downward trend for all reasons for entry. The number of placement episodes solely for child behavior or child alcohol and drug abuse reasons decreased by 48 percent since 2004. Children placed for parental reasons are down by 15 percent overall since 2004, but have seen an increase since the ten-year low in 2009. Children may be counted in more than one category if they entered care multiple times for different reasons during the year.

Figure 9. Categories of Reasons for Entering Out-of-home Care, 2004–2013

Table 10 presents the out-of-home placement re-entry rate by race and ethnicity. Re-entry means that a child who was discharged from out-of-home care to reunification with parents or primary caretakers, or who was discharged to live with relatives in 2012 (prior calendar year), re-entered care within 12 months of that discharge. Asian/Pacific Islander and American Indian children had the highest rates of re-entry.

Table 10. Out-of-home Care Re-entry Rate by Race/Ethnicity

Race/Ethnicity	Left Care in 2012	Re-entry within 12 Months	Percent
African American/Black	1,008	256	25.4
American Indian	381	121	31.8
Asian/Pacific Islander	134	43	32.1
White	2,107	503	23.9
Two or more races	546	153	28.0
Unable to determine	48	8	16.7
Missing data	3	1	33.3
Total children	4,227	1,085	25.7
Hispanic ethnicity—any race	456	110	24.1

Table 11 shows that 67 percent of the reasons for discharge when children left an episode of care in 2013 were for reunification with a parent or primary caretaker prior to placement. Another 12 percent had permanent transfer of legal and physical custody to a relative or were living with relatives, while about 10 percent were discharged to adoption. Note that children may have been discharged from care multiple times during the year, for multiple discharge reasons. Reasons for discharge are counted once per child within each reason type.

Table 11. Reasons for Discharge from Out-of-home Care

Reasons for Discharge	Episodes Discharged	Percent
Reunification with parents/primary caretakers	3,961	66.8
Adoption or tribal customary adoption	567	9.6
Permanent transfer of legal and physical custody to a relative	509	8.6
Living with other relatives	191	3.2
Guardianship	20	0.3
Reached age of majority or emancipated	402	6.8
Runaway from placement (placement no longer planned)	115	1.9
Death of child	13	0.2
Transfer to another agency	150	2.5
Total episodes discharged	5,928	100.0

Figure 10 shows the overall percent of discharges from out-of-home care to a family home setting (reunification with parents/caretakers, living with other relatives, permanent transfer of legal and physical custody to a relative, or finalized adoption/tribal customary adoption). The graph shows that these reasons as a proportion of all reasons for discharges have remained fairly consistent since 2004.

Figure 10. Percent of Discharges to Home Settings, 2004–2013

Figure 11 indicates that the proportion of discharges to adoption/tribal customary adoption have shown an upward trend. Discharges due to reaching age of majority or emancipated have been increasing, in proportion to other discharge locations. Tribal customary adoptions were combined with adoptions in this figure.

Figure 11. Percent of Discharges to Adoption and Children Reaching Age of Majority (Age 18), 2004–2013

**There are no intercensal population estimates for Indian reservations. These numbers represent the 2010 U.S. Census for children residing on the Leech Lake and White Earth reservations and who indicated American Indian alone or as one of two or more races. The Leech Lake reservation has land in Cass, Itasca, Beltrami and Hubbard counties. The White Earth reservation overlaps Mahnomen, Becker and Clearwater counties.*

Introduction

A primary goal of the department is to ensure that all children in foster care have safe, stable, loving and permanent families. When a child's physical, emotional, and mental health needs are met, they are more successful in their homes, schools, and communities, and are more likely to be productive members of society.

The public child protection system provides support and services to parents and children to safely reunify the majority of children who enter foster care with their families. For some children, parents cannot safely care for them and reunification cannot occur. When that happens, one possible outcome is for courts to order **Termination of Parental Rights (TPR)**, which severs the legal parent-child relationship and transfers guardianship of a child to the commissioner of the Minnesota Department of Human Services. These children are under state guardianship and are referred to as “**state wards**” in this section. It is anticipated that the commissioner, or state, will be the temporary guardian (parent) of children until they are adopted. As designated agents of the commissioner, county and tribal social service agencies are responsible for safety, placement, and well-being of these children, including identifying appropriate adoptive parents for state wards and working with adopting parents, court, and others to facilitate the adoption process. It is the department's responsibility to partner with county social service agencies to carry out the tasks required to legally finalize adoptions of children under guardianship of the commissioner.

This report mirrors the method in which the U.S. Census Bureau categorizes race and Hispanic ethnicity. Individuals may indicate they belong to more than one race. Hispanic ethnicity is specified separately from race. For example, children may be counted in their racial group or as having more than one race. They may also claim Hispanic ethnicity.

The Adoption Process

Adoption placement decisions – like foster care placement decisions – are governed by Minnesota law¹ and must be based on the best interests of a child. First consideration for placement is with a child's relative through blood, marriage, or adoption. Second consideration for placement is with an individual who is an important friend with whom the child has resided or had significant contact. A prospective adoptive parent, even a relative or important friend, must be able to meet a child's needs identified through the 10 best interest factors, including a child's:

- Current functioning and behaviors
- Medical needs
- Educational needs
- Developmental needs
- History and past experience
- Religious and cultural needs
- Connections with a community, school and faith community
- Interests and talents

¹ *Minn. Stat., section 260C.212, subd. 2*

- Relationships to current caregivers, parents, siblings and relatives
- Reasonable preference, if the court, or child-placing agency in the case of a voluntary placement, deems a child to be of sufficient age to express preferences.

After a child becomes a state ward, and if not being adopted by a relative or foster parent with whom they are residing, the responsible county agency must make recruitment efforts to identify an appropriate adoptive parent. Adoption recruitment activities may include:

- Registering a child on the State Adoption Exchange
- Listing a child on state and national public photo Web listings
- Presenting a child at a monthly Task Force on Permanency meeting
- Featuring a child in a weekly KSTP-TV “Thursday’s Child” waiting child segment
- Highlighting a child in a monthly StarTribune waiting child feature
- Contracting with a private agency to provide intensive child-specific recruitment services.

When a county of responsibility places a child in a home for the purpose of adoption, an **Adoption Placement Agreement** (APA) is signed. An APA outlines the rights and responsibilities of both the adopting parent(s) and county agency. After a court hearing and issuance of adoption decree or order for adoption, a legal parent-child relationship is established, meaning an adopting parent becomes the legal parent of a child with all the rights and duties of a birth parent.

Although procedurally each step of the adoption process is recorded by the department as a discrete event for data reporting purposes (e.g., entering guardianship, placement in a pre-adoptive home, adoption finalization), these procedural events may not accurately reflect the experience of a child, who often has been living with the adoptive family from early in his or her removal. Regardless, timeliness to establishing permanency (as measured by these discrete events) is a goal of the department, and is embedded into federal performance measures in the Federal and State Performance Measures section of this report.

This Adoptions section examines the demographics and racial/ethnic profile of children who were adopted, or were under state guardianship for the years 2009–2013. State ward data were examined at three levels, including children who:

- Entered guardianship
- Were adopted
- Were under guardianship at the end of the year.

Additionally, information is reported regarding the number of children leaving guardianship by reaching the age of majority (age 18), racial disproportionality, timeliness of pre-adoptive placements and adoptions, adoption of sibling groups, and adoption of wards of tribal court.

This report uses county data from the department’s Adoption Information System, and includes data from court, county, and tribal social service documents entered at the Minnesota Department of Human Services. In August 2008, the Minnesota State Adoptions Unit integrated its data reporting system with the Social Service Information System (SSIS). The conversion of data to the SSIS system, unfortunately, resulted in issues with reliability and consistency of data

prior to 2009. In an effort to improve accuracy of the data in this report, only data from the years 2009 through 2013 are reported. Note that all “percent” columns may not add up to 100 due to rounding of numbers or missing data.

Key findings in this section include:

- In 2013, 685 children came under state guardianship (became state wards) as a result of court terminations of parental rights. Fifty-one percent of children entering guardianship were in the birth–3 age group. Of all children entering guardianship, the majority (60 percent) were White, followed by African American/Black (19 percent).
- There were 696 children under state guardianship at the beginning of 2013, and 863 at the end of the year, an increase of 24 percent.
- There were 539 state wards adopted in 2013. Eighty-seven percent of adopted wards were under age 12. Of all children adopted in 2013, 63 percent were White and 17 percent were African American/Black.
- There were 49 state wards aging out of placement at age 18 without a permanent home.
- American Indian and African American/Black children were 3.2 and 3.0 times, respectively, more likely than White children to enter guardianship.

Figure 1 provides an overview of the guardianship continuum in which children enter guardianship as state wards, then leave when adopted or reach the age of majority. From 2009 to 2010, the number of children entering guardianship decreased 22 percent, but from 2010 to 2012 the number remained stable. In contrast, there was a sharp increase in children entering guardianship in 2013. Similarly, the number of children under guardianship at year end declined between 2009 and 2012, but increased in 2013. Inconsistent SSIS reporting may have contributed to artificially low numbers for the few years prior to 2013, when numbers increased. Improved efforts in communication and data sharing may partially explain the increases in children entering guardianship and remaining under guardianship in 2013. The number of children under guardianship who were adopted decreased between 2009 and 2011 by about 10 percent each year, but leveled off by 2012. The number of children aging out of guardianship decreased between 2009 and 2013.

Figure 1. Flow of Children Under Guardianship, 2009–2013

Demographics of State Wards

Figure 2 presents the number of children entering guardianship by age group for 2009–2013. Younger children, age birth–3 years, constituted 50.5 percent of new state wards entering the guardianship continuum in 2013. Eighty-nine percent of new state wards were under age 12. Although the total number of children entering guardianship decreased sharply in 2010, the proportion of children within each age group has remained relatively stable since 2009.

Figure 2. Children Entering Guardianship by Age Group, 2009–2013

Figure 3 presents the number of children who were adopted from 2009–2013 by age group. The largest age group of adopted children consists of those ages birth–3 years, followed by 6–11 years. In 2013, 58 percent of adopted children were under age 6. The proportion of children adopted within each age group has remained relatively stable since 2009.

Figure 3. State Wards Adopted by Age Group, 2009–2013

Figure 4 reveals that while there was a decrease in the number of children in guardianship at year end from 2009 to 2012, the number increased in 2013. This increase was most pronounced in the birth–3 age group.

Figure 4. State Wards in Guardianship at Year End by Age Group, 2009–2013

About 50 percent of children entering guardianship in 2013 were girls. As seen in previous graphs, about half of new wards are under age 4. The graph below indicates that children under age 2 make up the largest number of these children. There are no apparent differences between girls and boys entering guardianship by age.

Figure 5. Children Entering Guardianship by Gender and Age

The age distribution of children adopted in 2013 looks similar to, though somewhat older than, those entering, presumably due to the time it takes to finalize an adoption once a child becomes a state ward. Slightly more (53 percent) females than males were adopted in 2013.

Figure 6. Children Adopted by Gender and Age

Figure 7 shows a different distribution across age than the entering and adopted numbers. Older children comprised a larger proportion of those in guardianship on Dec. 31, 2013, compared to children entering guardianship and adopted in 2013, though the largest group of children at this point was still children ages birth–3. Older children entering guardianship are less likely to be adopted, and when they are, the time to adoption is much longer than for younger children. There were no pronounced gender differences in children in guardianship on the last day of the year, overall or by age.

Figure 7. State Wards in Guardianship at Year End by Gender and Age

Figure 8 illustrates that in 2013, about 60 percent of children entering guardianship were White, followed by African American/Black (19 percent), and children of two or more races (15 percent); six children were missing race data. Asian and Pacific Islander children have historically become state wards in small numbers and this trend continued between 2009 and 2013. The number of children entering guardianship has increased overall by 36 percent between 2012 and 2013. Children with two or more races had the largest overall percentage increase, followed by African American/Black, Hispanic and White children. The number of American Indian children entering state guardianship has been small and stable since 2009, however, data do not include American Indian children under guardianship of a tribe.

Figure 8. Children Entering Guardianship by Race/Ethnicity, 2009–2013

Figure 9 shows that the largest group of children adopted in 2013 was White (63 percent), followed by African American/Black (17 percent) and children with two or more races (10 percent). There was a 20 percent overall decrease in the number of state wards adopted between 2009 and 2013.

Figure 9. State Wards Adopted by Race/Ethnicity, 2009–2013

Figure 10 illustrates the race/ethnicity of children remaining under guardianship at year end. The increase in children remaining under guardianship in 2013 was most pronounced among children with two or more races (46 percent), followed by White children (25 percent) and African American/Black children (19 percent).

Figure 10. State Wards in Guardianship at Year End by Race/Ethnicity, 2009–2013

Racial Disproportionality

Table 1 and Figure 11 show the over/under representation of children of color who entered guardianship in 2013 (note that wards of tribal courts are not included in this table; see Table 4). U.S. Census estimates from 2009–2013 were used for the population comparisons. The number of White children entering guardianship was much higher than those of other races/ethnicities; however, they are under-represented when compared to the overall state population. In 2013, the 130 African American/Black children that entered guardianship represent 1.22 children per 1,000 African American/Black children in the Minnesota population. Because the White population is so large, 410 White children entering guardianship only represented 0.41 children per 1,000. Compared to White children entering guardianship in 2013, African American/Black children were 3.0 times more likely to enter guardianship, American Indian children were 3.2 times more likely to enter guardianship, and children of two or more races were 3.6 more likely to enter guardianship.

Figure 11. Children Entering Guardianship per 1,000 by Race/Ethnicity, 2009–2013

Pre-adoptive Placement and Adoption after Entering Guardianship

Figure 12 presents the average number of days between children entering guardianship and pre-adoptive placement, between pre-adoptive placement and adoption, and between entering guardianship and adoption in 2009–2013. Between 2012 and 2013, the average number of days from entering guardianship to adoption decreased by 5 percent. This reduction appears to be due to a shorter time frame between pre-adoptive placement and adoption.

Note: The sum of “Entering guardianship to pre-adoptive placement” and “Pre-adoptive placement to adoption” does not equal the average number of days for “Entering guardianship to adoption” due to missing pre-adoptive placement data.

Figure 12. Time to Permanency for State Wards Adopted, 2009–2013

Figure 13 shows the average number of days between entering guardianship and adoption for 2009–2013 by children’s age group. Older children who were adopted during each of the five years experienced a much greater average number of days under state guardianship than younger children.

Figure 13. Time from Entering Guardianship to Adoption by Age, 2009–2013

Adoption of Siblings

Keeping siblings together contributes to maintaining family relationships and cultural connections. Separating siblings in foster care and adoption may add to the trauma experienced by separation from birth parents and other family members. Minnesota law² requires siblings to be placed together for foster care and adoption at the earliest possible time, unless it is determined not to be in the best interests of a sibling, or unless it is not possible after appropriate efforts by the responsible social services agency. With passage of the Fostering Connections to Success and Increasing Adoptions Act of 2008, federal law also requires siblings to be placed together whenever possible. Separation of siblings may be in some children's best interests if a sibling group is going to be divided to be adopted by different relatives, or if one sibling will be adopted by a paternal relative who is not related to the other siblings. In other cases, one sibling's special needs may make it difficult to identify an adoptive parent who can meet the needs of all of the siblings together.

Table 2 shows the number and percentages of sibling groups that were adopted fully intact, and either partially or fully intact for the years 2009–2013. In 2013, 72 percent of sibling groups were preserved in their entirety in their adoptions (coincidentally, the number of sibling groups available and sibling groups adopted fully intact are identical for 2012 and 2013). An additional 16 sibling groups were adopted partially intact (two or more siblings were adopted into the same family unit); thus, about 84 percent of sibling groups were adopted either partially or fully intact in 2013. These percentages have had only minor fluctuations between 2009 and 2013.

Table 1. Sibling Group Preservation in Adoptions, 2009–2013

Year	2009	2010	2011	2012	2013
Sibling groups available for adoption with at least one child adopted	154	153	133	135	135
Sibling groups adopted fully intact	103	111	90	97	97
Sibling groups adopted partially intact	25	18	14	13	16
Percent of sibling groups adopted fully intact	66.9	72.5	67.7	71.9	71.9
Percent of sibling groups adopted partially or fully intact	83.1	84.3	78.2	81.5	83.7

The department defines siblings through the biological mother, so siblings placed with, or separated from paternal siblings are not included in the data. In addition, siblings who are 18 years of age or older, who were previously adopted, or who were never under guardianship of the commissioner, are also not counted as part of a child's sibling group in this data table. Because percentages of sibling groups preserved are calculated for adoptions within a calendar year, some intact adoptions may not be counted if adoptions of the individual children took place over the span of more than one year. Note that the percentages for sibling group preservations are smaller than those reported in previous years due to increased accuracy in determining sibling groups. The current method includes all sibling groups available for adoption during a given year in which one or more siblings were adopted.

²Minnesota Statutes, section 260C.212, subdivision 2 [d]

Tribal Ward Adoptions, 2009–2013

Most tribes in Minnesota offer culturally appropriate permanency through tribal court in place of state ward status for their children. One of the tribal court permanency options is customary adoption, which does not include terminating parental rights. In addition to the 34 American Indian state wards adopted in 2013 reported previously, 21 American Indian wards of tribal court were adopted through tribal customary adoptions during this time period. The majority of these children were members of the White Earth Band of Ojibwe.

Table 4 includes tribal wards adopted in 2009–2013 by age group; Table 5 includes tribal wards adopted by percent male and female. Although there were minor fluctuations in the numbers by age group and gender across years, the relatively small number of tribal court wards within each group limits interpretation of these trends.

Table 2. Tribal Wards Adopted by Age Group, 2009–2013

Year	Age				
	Birth to age 5		Age 6 and older		Total
	N	%	N	%	N
2009	14	70.0	6	30.0	20
2010	14	60.9	9	39.1	23
2011	23	60.5	15	39.5	38
2012	22	73.3	8	26.7	30
2013	10	47.6	11	52.4	21

Table 3. Tribal Wards Adopted by Gender, 2009–2013

Year	Gender	
	Percent Male	Percent Female
2009	45.0	55.0
2010	43.5	56.5
2011	60.5	39.5
2012	60.0	40.0
2013	47.6	52.3

Introduction

The Federal Child and Family Service Reviews examine state performance in child safety and permanency. To inform this process, the Administration for Children and Families created two child safety performance measures and 15 permanency performance measures. The permanency measures can be grouped into the categories of:

- Timeliness and permanency of reunification
- Timeliness of adoptions of children discharged from foster care
- Achieving permanency for children in care for extended periods of time
- Placement stability.

Performance measures established at the state level include:

- Timeliness to alleged victim contact with a social worker in child protection reports
- Physical health exams provided for children in foster care
- Mental health screenings for children receiving child protection case management services or who are in out-of-home care
- Time to a transfer of legal and physical custody to a relative.

Section IV includes these individual measures by county/Leech Lake and White Earth Bands of Ojibwe for calendar year 2013. Caution should be used in drawing conclusions from measures with small numbers. These data fulfill reporting requirements for the Vulnerable Children and Adults Act [Minn. Stat., section 256M.80, subd.2].

A variety of tools and processes are being used to transition the state and counties to these measures, and to understand and monitor ongoing performance. These include:

- Adding revised outcome measures to the Charting and Analysis tool in the Social Services Information System (SSIS)
- Integrating new measures into the Minnesota Child and Family Service Reviews
- Subscribing to the University of Chicago—Chapin Hall Center for State Foster Care and Adoption Data
- Providing a publicly accessible dashboard on selected measures.

Federal Performance Indicators

The federal Child and Family Service Reviews examine state performance in child safety and permanency. To inform this process, the Administration for Children and Families created two safety measures and 15 permanency performance measures. The permanency measures can be grouped into the categories of

- Timeliness and permanency of reunification
- Timeliness of adoptions of children discharged from foster care
- Achieving permanency for children in care for extended periods of time
- Placement stability.

Caution should be used in drawing conclusions from measures with small numbers.

Federal Performance Indicators	Minnesota results, 2013	Federal standards
Safety Measure 1.1: Absence of Maltreatment Recurrence Of all who were victims of determined maltreatment during the last six months of 2012, percent who did not have another determined report within six months	97.2% (1,995 of 2,053)	94.6% or higher
Safety Measure 1.2: Absence of Maltreatment in Foster Care Of all children who were served in foster care during the reporting period, the percent who were not the subjects of determined maltreatment by a foster parent or facility staff	99.8% (11,483 of 11,510)	99.68% or higher
Permanency Measure 1.1: Time to Reunification Of children discharged to reunification with primary caretakers, percent reunified in less than 12 months from the time of the latest removal from home	86.7% (2,849 of 3,286)	75.2% or higher
Permanency Measure 1.2: Median Months to Reunification Median length of stay in care from removal from home until the date of discharge to reunification	4.9 months	5.4 months or less
Permanency Measure 1.3: Reunification After First Removal Of children in care for the first time, percent discharged from foster care to reunification in less than 12 months	55.7% (1,013 of 1,820)	48.4% or higher
Permanency Measure 1.4: Placement Re-entry Of children discharged to reunification, percent re-entered foster care in less than 12 months	25.7% (1,085 of 4,227)	9.9% or lower
Permanency Measure 2.1: Adoption in Less than 24 Months Of children discharged from foster care to a finalized adoption, percent adopted in less than 24 months	54.7% (310 of 567)	36.6% or higher

Federal Performance Indicators *(continued)*

Federal Performance Indicators	Minnesota results, 2013	Federal standards
Permanency Measure 2.2: Median Months to Adoption Of children discharged from foster care to a finalized adoption, median length of stay in care	22.7 months	27.3 months or less
Permanency Measure 2.3: Discharges to Adoption Of children in care for 17 continuous months or longer on Jan. 1, 2013, percent discharged from care to a finalized adoption by Dec. 31, 2013	20.7% (266 of 1,285)	22.7% or higher
Permanency Measure 2.4: Legally Free for Adoption Of children in care for 17 continuous months or longer on Jan. 1, 2013, and who were not legally free for adoption prior to that day, percent who became legally free for adoption during the first six months of 2013	3.0% (24 of 807)	10.9% or higher
Permanency Measure 2.5: Time to Adoption Once Legally Free Of all children who became legally free for adoption during 2012, percent discharged from care to a finalized adoption in less than 12 months from the date of becoming legally free	49.8% (298 of 598)	53.7% or higher
Permanency Measure 3.1: Permanency for Children in Care 24 or More Months Of children in care for 24 months or longer on Jan. 1, 2013, percent discharged to a permanent home by Dec. 31, 2013, and prior to their 18 th birthday	19.2% (195 of 1,016)	29.1% or higher
Permanency Measure 3.2: Permanency for Children Legally Free for Adoption Of children discharged from care during 2012, and who were legally free for adoption (i.e., a parental rights termination for both parents) at the time of discharge, percent discharged to a permanent home prior to their 18 th birthday	98.0% (588 of 600)	98.0% or higher
Permanency Measure 3.3: Aging Out of Long-term Care Of children who aged out of care or reached their 18 th birthday while in care, but had not yet been discharged, percent in foster care for three years or longer	30.5% (143 of 469)	37.5% or lower
Permanency Measure 4.1: Placement Stability for Children in Care Less than 12 Months Of children in care during 2012 for at least eight days, but less than 12 months, percent with two or fewer placement settings	85.8% (5,317 of 6,196)	86.0% or higher
Permanency Measure 4.2: Placement Stability for Children in Care More than 12 and Less than 24 Months Of children in out-of-home care during 2012 for at least 12 months, but less than 24 months, percent with two or fewer placement settings	60.7% (1,249 of 2,058)	65.4% or higher
Permanency Measure 4.3: Placement Stability for Children in Care 24 Months or Longer Of children in out-of-home care during 2012 for at least 24 months, percent with two or fewer placement settings	33.5% (573 of 1,710)	41.8% or higher

Safety Measure 1.1: Absence of Repeat Maltreatment

Of all who were victims of determined maltreatment during the last six months of 2012, what number did not have another determined report within six months? The national standard is 94.6 or higher.

County/Tribe	Unique determined victims July 1, 2012–Dec. 31, 2012	Victims–no recurrence within six months	Percent not recurring within six months

State Performance Measure: Timeliness to Initial Contact with Child Subjects of Maltreatment Reports

Percentage of face-to-face contacts with children who were subjects of maltreatment reports within required time frames. Note that numbers of children do not match those in Section I of this report, as a different methodology is used for determining the population in order to more accurately count children who should be contacted and in what time frame.

County/Tribe	Family Assessment		Family Investigation— no substantial child endangerment alleged		Family Investigation— substantial child endangerment alleged	
	Total child subjects	Percent with contact within 120 hours	Total child subjects	Percent with contact within 120 hours	Total child subjects	Percent with contact within 24 hours
